2019 - 2021

- ❖ With the exception of Auto Theft, every indicator decreased in 2020
- ❖ In general, the total MCI decreased, down about 13%

2021 - 2022

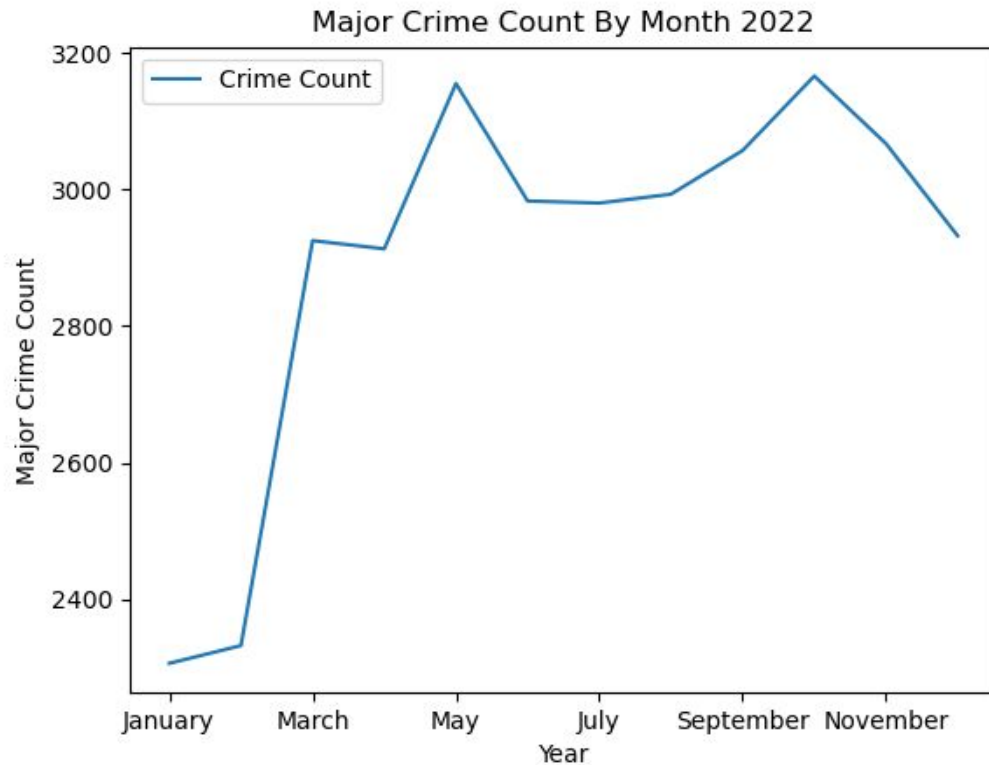

- ❖ All indicators on the rise, up about 17%

	Assault	Auto Theft	Robbery	Break and Enter	Theft Over	Total MCI
2016	nan%	nan%	nan%	nan%	nan%	nan%
2017	2.51%	9.13%	6.45%	8.15%	15.01%	5.26%
2018	3.23%	29.47%	-5.83%	10.57%	7.62%	6.98%
2019	4.61%	11.78%	-6.02%	11.16%	5.86%	6.18%
2020	-11.97%	7.09%	-23.11%	-18.73%	-11.3%	-11.83%
2021	4.04%	15.5%	-18.78%	-18.88%	-13.0%	-1.38%
2022	9.3%	46.41%	23.42%	5.03%	27.49%	17.23%

# Major Crime in Toronto 2022

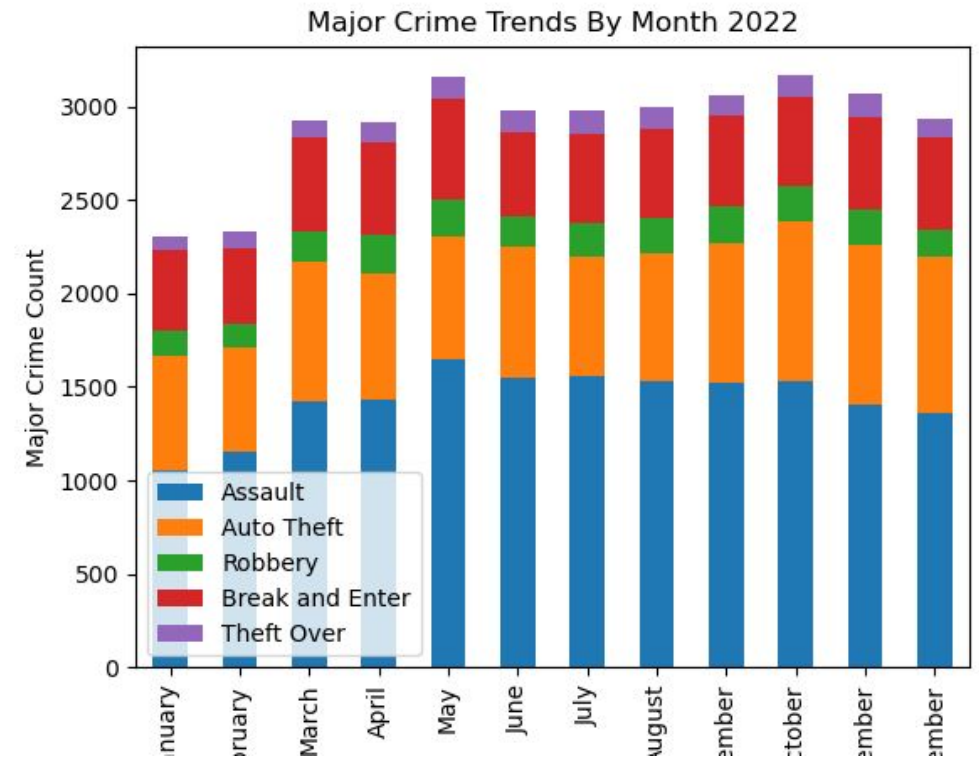

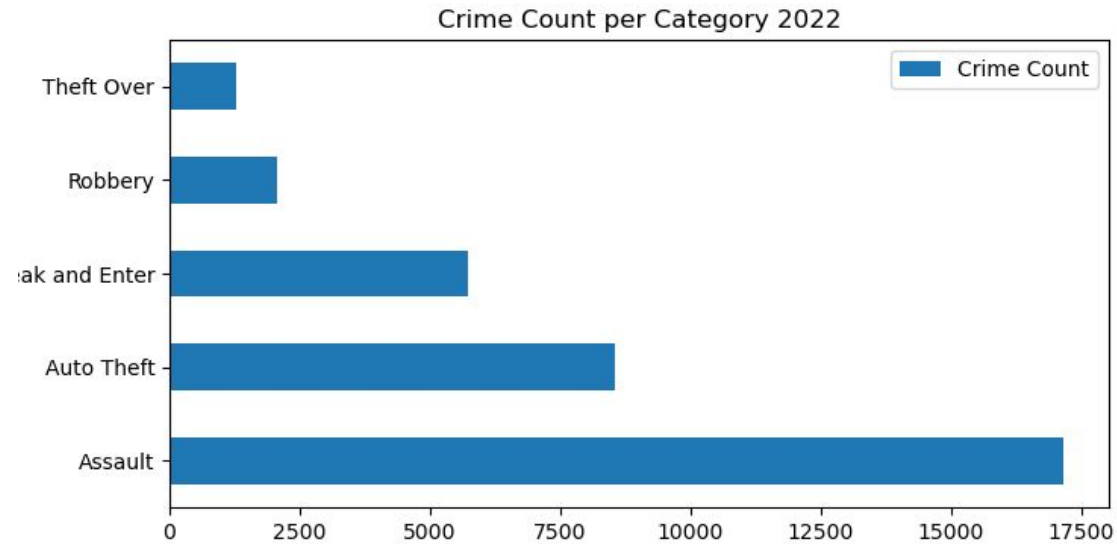

---

- ❖ Crime count at highest in May and October
- ❖ Crime count drop in Winter time

# Major Crime in Toronto 2022

---

# Major Crime in Toronto 2022

---

**Guildwood, Bayview  
Woods-Steels and  
Woodbine-Lumsden**  
would be the safest  
neighbourhoods with the  
lowest number of crimes

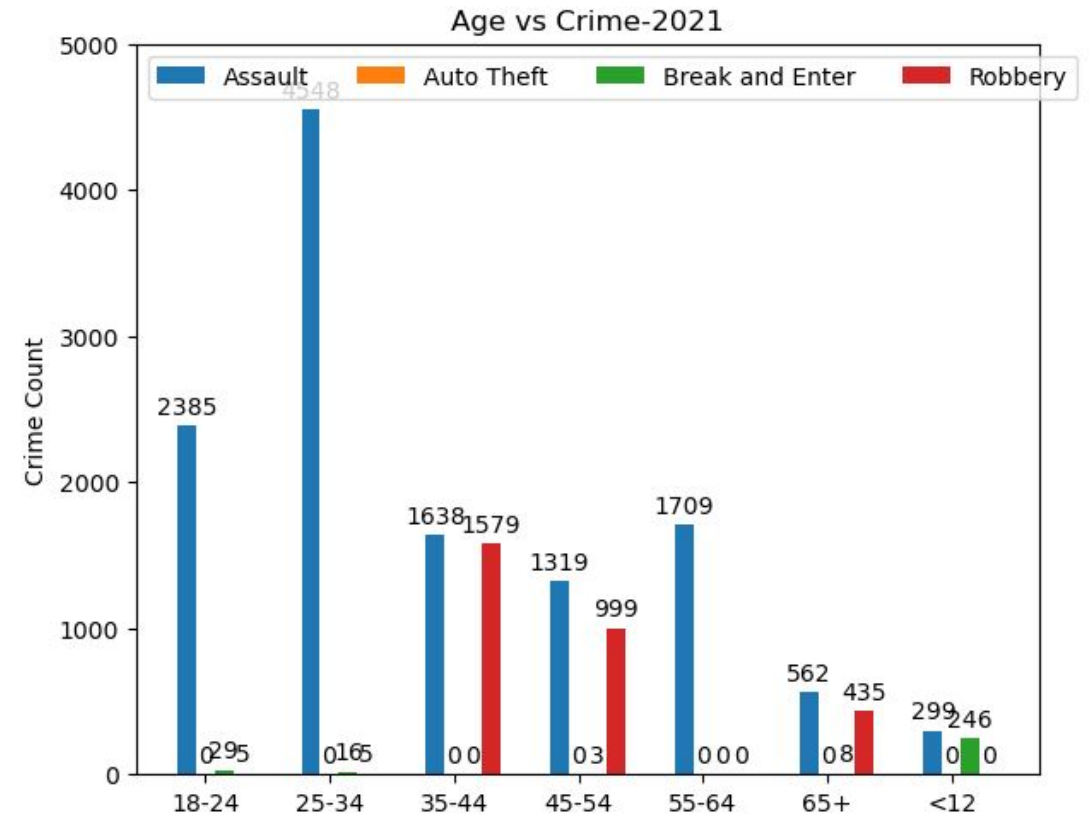

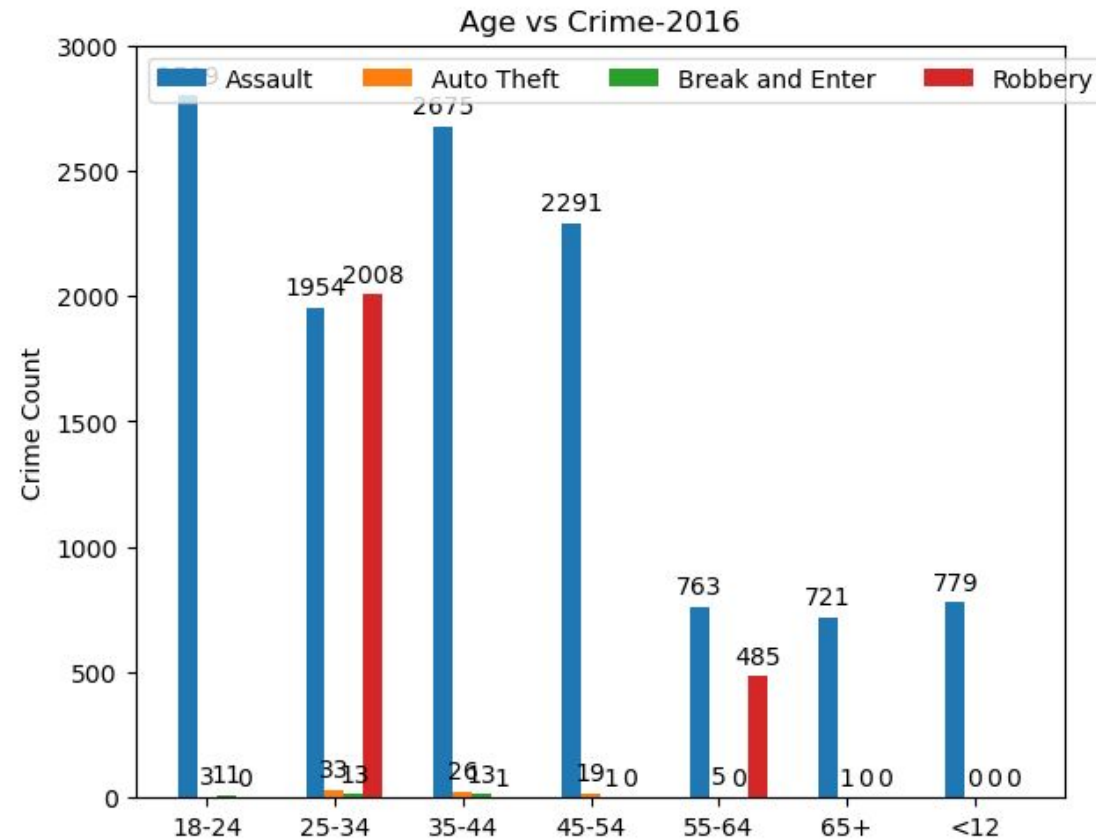

# Major Crime in Toronto 2022

---

**West Humber-Clairville,**  
**Moss Park** and  
**Downtown Yonge East**  
would be the worst  
neighbourhoods to live  
in, with the highest  
number of crimes

# Crimes vs Age Group in 2016 & 2021

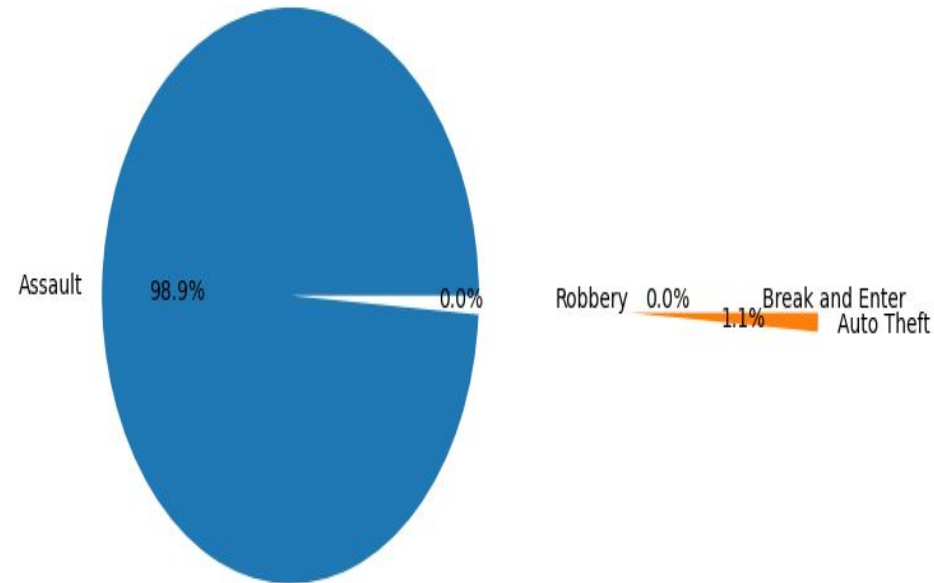

# Crimes vs Gender in 2016

---

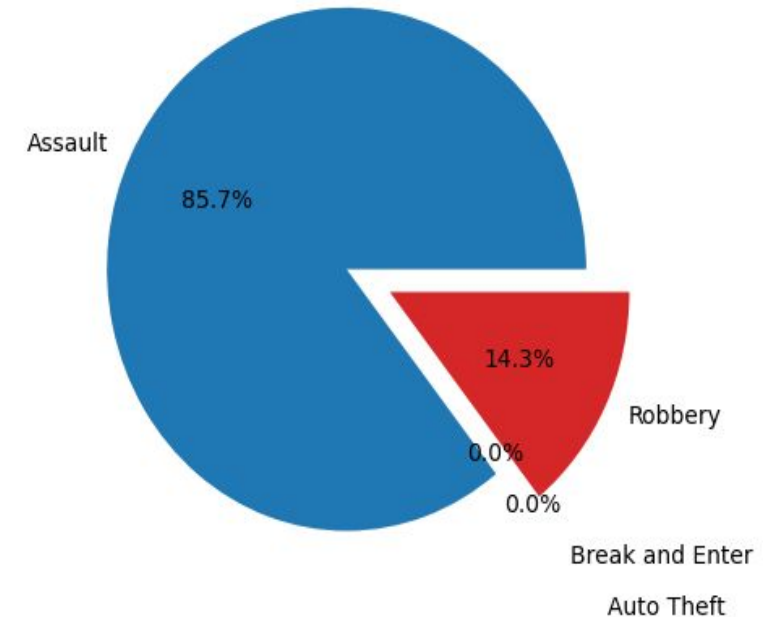

Female vs. Crime

Male vs. Crime

Unidentified Gender vs. Crime

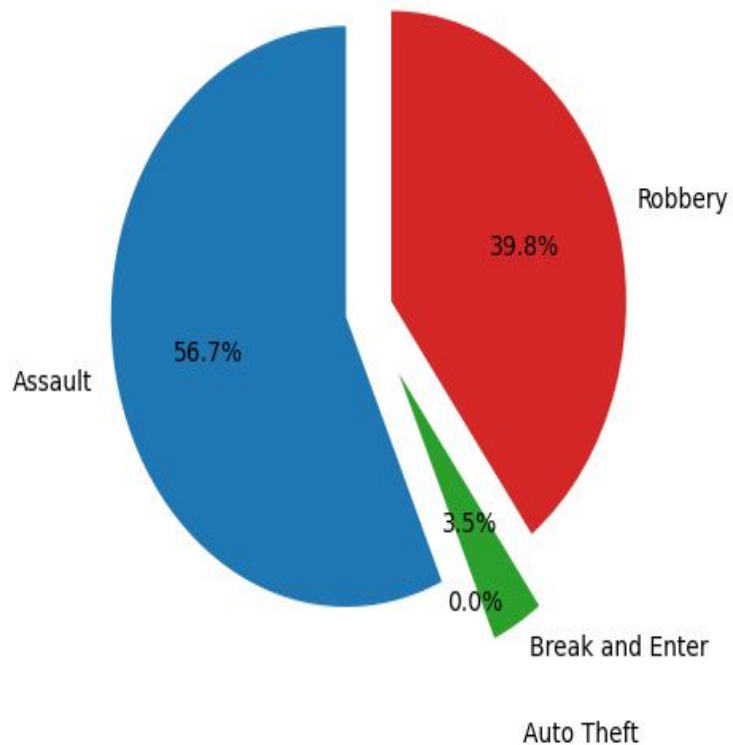

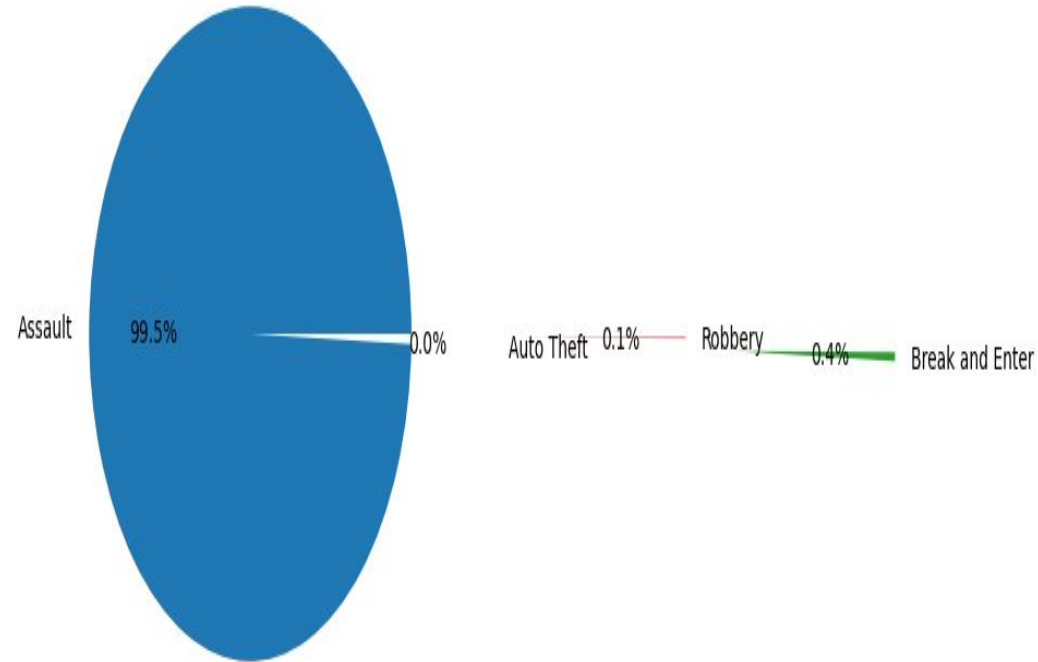

# Crimes vs Gender in 2021

---

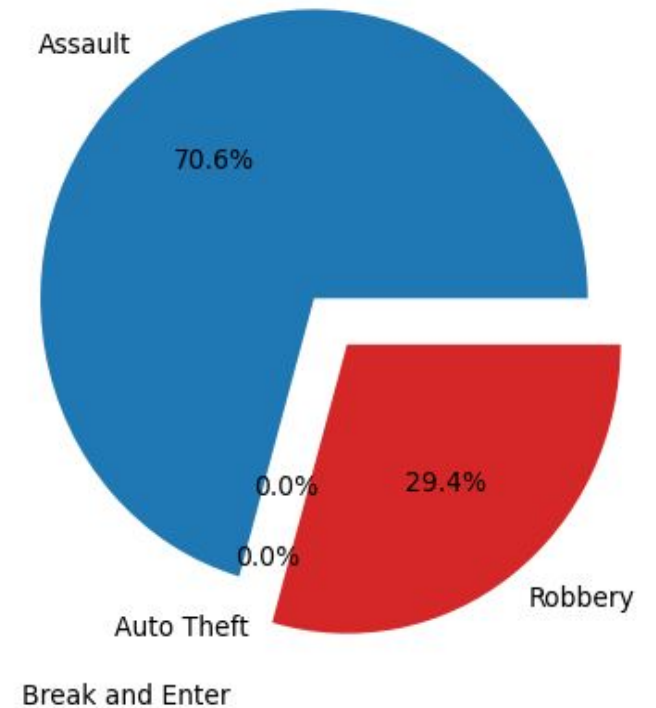

Female vs. Crime

Male vs. Crime

Unidentified Gender vs. Crime

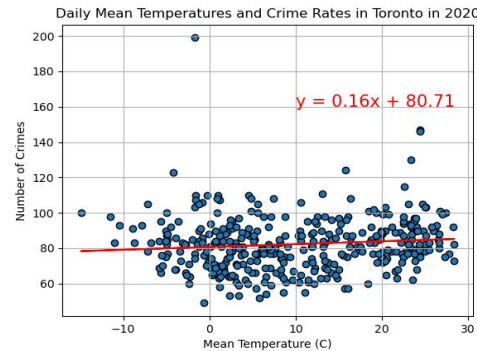

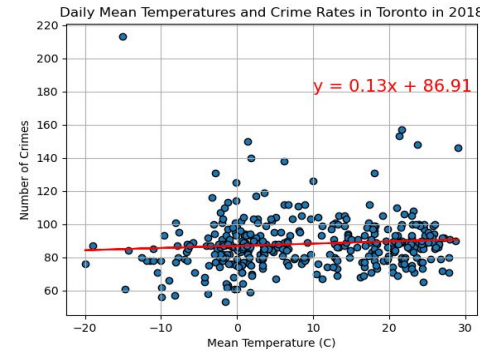

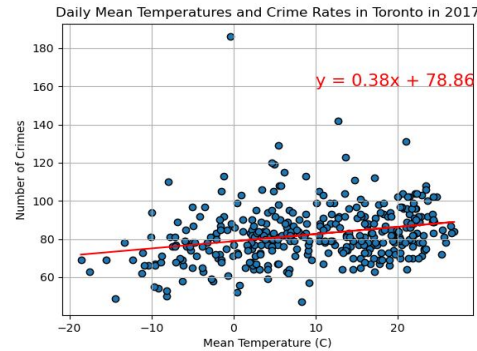

# Crime and Weather: Linear Regression Analysis

---

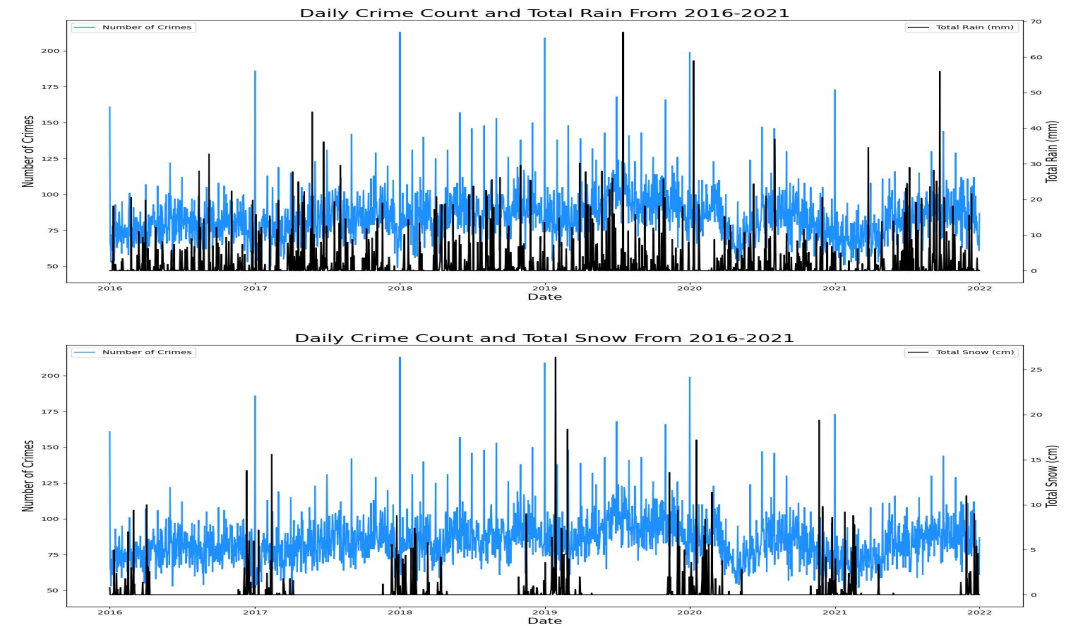

A **positive relationship** between the incidence of crime and temperature is observed; the number of crimes committed per day increases with the daily mean temperature.

# Crime and Weather: Linear Regression Analysis

Yearly regression analysis reaffirms positive relationship between mean temperatures and crime rates, with some minor discrepancies (see 2020 linear regression)

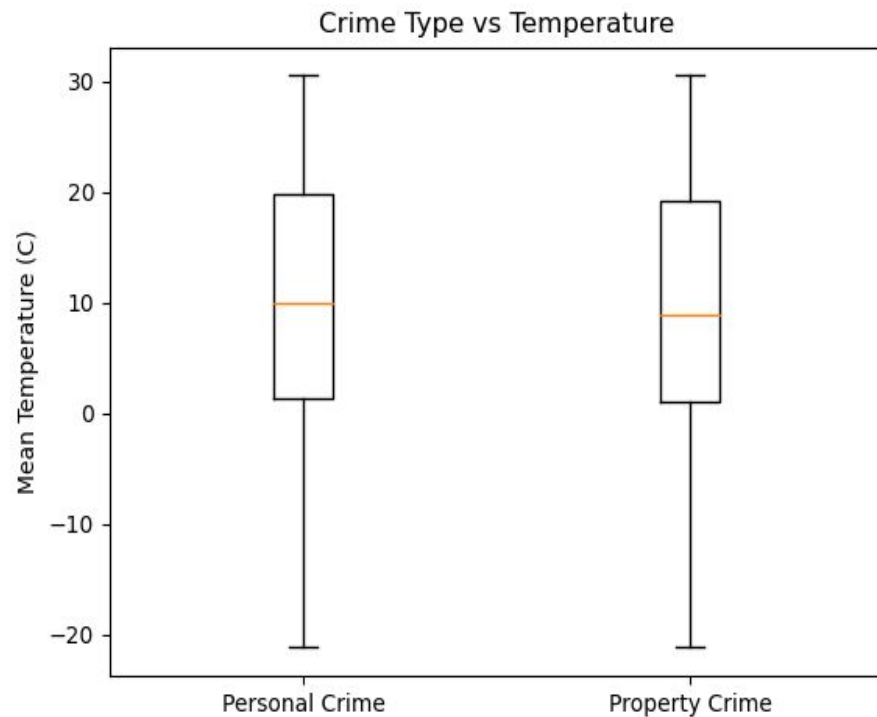

# Crime and Weather: Analyzing Trends

- ❖ Mean temperatures and number of crimes committed move together (positive relationship)
- ❖ Total snowfall and number of crimes committed move in the opposite direction (negative relationship), reaffirming observed relationship between the incidence of crime in warmer weather

# Crime and Weather: Distribution of Mean Temperature by Crime Type

---

- ❖ Major crime categories have been grouped into two primary buckets: **personal crime** (assault) and **property crime** (auto theft, robbery, break and enter, general theft)
- ❖ No significant/discernible differences between personal and property crime in terms of spread, skewness and general distribution of data
- ❖ Median value for property crime is slightly lower
